

## **Track Thread Plate Instructions**

1. Mark out the location for the cables on the track
2. Drop the screw from plastic packet marked thread plates into the Top Boss so that the screw thread is showing beneath the top boss.
3. Attach the diamond shape to the thread of the protruding screw.
4. Insert the diamond shape (thread plate) into the track.
5. Insert Philips Head screw driver into recess on top of top boss and tighten screw clock wise so that it tightens the top boss to the track.
6. Repeat the same process for each cable required to complete the installation.
7. Drill clearance holes in the track for mounting screws, usually about 100 mm from each end and 1 or 2 around the middle area depending on the length of the track.
8. Install the track on ceiling or window. Install the bottom track directly under the top track on the floor.  
(a plum bob is handy for this application)
9. Always make sure that there is enough strength in what you are mounting the track too, to take the weight of the display.

**No Responsibility will be taken for incorrect fixing.  
This responsibility rests with the installer.**

**Call 1300 134 773 if you have any questions.**
